1. to check if your work is done and be sure the work is working
2. creating a new file and add it to cloned git repository
3. be sure your work is saved and to be sure of closing the work
4. cloning the git server to your new computer

Problem 4

Proper use of version control means understanding **why** we use it and not just memorizing **how** to use it.

Discuss the following questions with your team, and type or write your answers in the space on the right.

1. Why do you think that it is a good idea to check the status before staging files?

2. When starting a brand new assignment, what is the first thing you should do, and why?

3. What is the last thing that you should do before taking a break from working?

4. Assume that you are getting back to work on a different computer. What is the first thing you should do?
