Problem 1

Making and overcoming mistakes is an essential part of problem solving.

Talk with your team and identify *at least three mistakes* that you made and overcame throughout any of the class activities in this unit. Did any of you make the same kind of mistake?

Be sure to describe specifically what you did to overcome each mistake. Did you look up the solution in the slides? Ask for help on the Discord server? Go to office hours? Something else?

miss understood the git commands and how to use them, I made sure to research about it and understand it well

made some mistakes drawing the tree and I went back to it and did it correctly

did not know how to clone the git respiratory but went back to the slides and read it a couple of times
